Volume 11, Number 2

### MARS File

The U.S. Bureau of the Census recently released its "Modified Age, Race, Sex and Hispanic Origin Data" (MARS).

This file is now available for Utah and its counties through the Utah State Data Center. It will be used by the Census for its population estimates and projections work in the 1990s. MARS data for additional levels of geography will soon be available. A Utah state summary is provided in Table 1.

MARS data is provided by sex and single year of age (0 to 100+) for the following race and origin categories:

**ORIGIN** RACE White Hispanic White Non-Hispanic Black Hispanic Non-Hispanic Black American Indian, Eskimo or Aleut Hispanic American Indian, Eskimo or Aleut Non-Hispanic Asian or Pacific Islander Hispanic Non-Hispanic Asian or Pacific Islander

This "modified" data is consistent with the total counts of the 1990 Census as enumerated. Race modifications by the Census Bureau were made by assigning persons in the "Other Race" category to one of the four above named races. This assignment was done on an individual basis in order to preserve household racial heterogeneity. Nationally, over 95 percent of the "Other Race" persons reported being of Hispanic origin. A donor-donee method was used in these race assignments.

Age modifications corrected for stated age (which respondents tended to round upward, particularly for age 0) and year of birth as reported on the Census form. Acceptable birth year responses were received for about 95 percent of the population.

A more detailed description of the modification procedures and methods used by the Census in developing MARS data is available from the Utah State Data Center.

For more information on the Census MARS files, please call (801) 538-1036.

# U.S. Census Bureau's "Survey Abstract"

The Census Bureau conducts a wide variety of surveys every month, published in the P-20, P-23, P-60, and P-70 report series and by other Federal agencies in their own publication series. An important use of survey data is to update the 1990 Census, usually at the national level only. Another use of the surveys is to obtain data not included on the census questionnaire (e.g. crime statistics).

The Demographic Surveys Division of the U.S. Census Bureau has prepared a very comprehensive description of the population-related surveys. This "Survey Abstract" provides useful information on survey size, frequency, and release of survey results.

The following are just some of the surveys conducted by the Census Bureau: Current Population Survey; Consumer Expenditure Survey; American Housing Survey; National Health Interview Survey; National Maternal and Infant Health Survey; National Crime Survey; National Prisoner Statistics Survey; Schools and Staffing Survey; 1991 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation; Survey of College Graduates.

For more information on special surveys please call the U.S. Census Bureau at (301) 763-2776, or the Utah State Data Center at (801) 538-1036.

# Economic and Demographic Projections: 1992 Report

The Demographic and Economic Analysis section of the Utah Office of Planning and Budget will soon release its 1992 *Economic and Demographic Projections* Report. This report provides population and employment projections for Utah, its multi-county districts and counties to the year 2020. The 1992 report provides projections based on the 1990 Census results (the 1980 Census was the base year for the 1990 projections report).

These new projections were developed using the Utah Process Economic and Demographic Model (UPED) -- the model the Office of Planning and Budget has used for many years to generate population and employment impact projections.

New in the 1992 edition are employment projections on a county level (the 1990 report provided employment projections only for Utah and the multi-county districts). Population and employment projections for counties were made possible by two additional models used in conjunction with UPED -- County Age and Sex Allocation (CASA) and Utah County Allocation of Population and Employment (UCAPE).

Utah is projected to have a population of 2,774,019 in 2020, growing an average of 1.6 percent annually from 1990. During the 1990s, Utah is expected to grow from 1,722,850 to 1,992,048 -- 15.6 percent, slightly lower than the population growth between 1980 and 1990, 17.9 percent. During the first decade of the 21st century, Utah's population is projected to witness a greater increase of 21 percent.

Employment is projected to increase an average of 1.7 percent annually, growing from 810,360 in 1990 to 1,343,371 in 2020. The greatest increase in employment will occur between 2000 and 2010, when the state's employment is projected to grow by 21 percent. High growth is also projected during the 1990s, at 20.8 percent.

Tables 2 and 3 provide population and employment projections by county and multi-county district. The actual report provides greater detail -- projections by age and sex, and employment projections by major industry -- for the same geographic level.

The 1992 Economic and Demographic Projections Report will be available at the end of April. The report costs \$12.00 and can be ordered by calling (801) 538-1036.

# **RURAL UTAH TOURISM**

# ISSUES TRENDS FINANCING INFRASTRUCTURE RECOMMENDATIONS FOR THE FUTURE

A report on rural Utah tourism issues has just been completed by the Utah Office of Planning and Budget, in conjunction with the Bureau of Economic and Business Research (University of Utah) and Utah Department of Community and Economic Development. The study includes updated information about the importance of the tourism industry, a tourism database, and projections of tourism growth at both the state and regional level. A primary contribution of the study is the development of a tourism infrastructure inventory and recommendations for improvements. Since infrastructure improvements will cost money, the study also identifies several financing sources.

The box below and Figure 1 are examples of the tourism data included in the report. During 1991 approximately 14 million visitors came to Utah and spent an estimated \$2.9 billion. These expenditures generated an estimated \$163 million in state taxes and \$51 million in local taxes. The tourism, travel and recreation industry includes approximately 61,000 jobs, 8.2 percent of total non-agricultural jobs in the state.

In contrast to much of the rest of the country where the travel business has been flat, virtually every tourism indicator in Utah showed a strong increase in 1991. From 1990 to 1991, hotel and motel room rents in Utah increased 14 percent in actual dollars and by over 9 percent in inflation adjusted dollars. During the same time period, visits to Utah national parks increased 9.5 percent; state parks 7.3 percent; and ski areas 10 percent. The Salt Lake International Airport experienced a 4.1 percent increase in passengers.

The study includes analysis of many specific tourism issues. To better understand a community's transformation into a tourism based economy, a case study of Moab and Grand County, Utah has been prepared. The economic and fiscal impacts of visitors to Utah and a potential tourism project in southern Utah has been modeled. Since Salt Lake is the U.S. bid city for the 2002 Winter Olympic

Games, the economic impacts of Utah hosting the Games has been examined.

Several primary findings and general conclusions about Utah's tourism industry are articulated in the study:

- Tourism represents one of the most important activities in the Utah economy and is vital to rural Utah.
- The prospects for continued growth in the industry are favorable.
- The impact on state and local revenues is generally positive.
- Tourism can help to stabilize and diversify the economic base without necessarily displacing other industries.
- Although the infrastructure to support tourism is substantial, improvements and/or additions are needed.
- Many sources exist to finance tourism infrastructure improvements.

Table 4 summarizes many of the tourism infrastructure development priorities by region. The report includes general recommendations on improvements to Utah's tourism infrastructure and identifies several sources for paying for these improvements.

Many people and organizations helped develop, update and revise the information included in this report. Comments were received from all of the rural travel regions, every multi-county planning district within the study area, and a network of local tourism representatives from both the public and private sector. Representatives from the federal land management agencies and the Utah Division of State Parks and Recreation and the Division of Travel Development also offered assistance. The study was funded by the U.S. Dept. of Commerce, the Economic Development Administration and the State of Utah.

The report, Rural Utah Tourism: Issues, Trends, Financing, Infrastructure, Recommendations for the Future, is available from the Utah Office of Planning and Budget, (801) 538-1036.

### Utah Tourism Profile: 1991

- 14 Million Visitors
- \$2.9 Billion in Expenditures
- o \$214 Million State and Local Tax Revenues
- o 61,000 Jobs (8.2 Percent of Total)

Bryce Canyon Rd. US 89 Kanab Rest Stop	Bus Service to Local Communities  Signage on I-15  Bed and Breakfast Development  Development of Richfield Patriotic Pageant

<sup>\*</sup> A complete listing and description of these priorities is included in the report.

# Geographic Information Systems (GIS)

The Demographic and Economic Analysis Section (DEA) of the Office of Planning and Budget has recently begun using Geographic Information Systems (GIS) in conjunction with demographic analysis. We have recognized that GIS can be a powerful tool for linking and integrating information, and for presenting information visually with maps. Our uses of GIS are limited at present because the database has not been fully developed and our personnel do not yet have the technical expertise to fully utilize GIS.

DEA has contracted with the Automated Geographic Reference Center (AGRC), a part of the State Department of Administrative Services, for assistance in the development of a demographic component for the State Geographic Information Database (SGID). SGID is the central repository and clearinghouse for geographic information developed or acquired by all state agencies. It also serves as a reference for geographic information developed by many federal and local government agencies. Data from SGID can be accessed on-line or by digital transfer and is available statewide.

### The Demographic Database

Our database will consist of geographic layers which use the Tiger files released by the Census Bureau from the 1990 Census. The layers are census blocks, block groups, tracts or BNAs (block numbering areas), places, and census county divisions. Blocks are similar to city blocks and are the smallest geographic unit for which the Census Bureau releases information. Block groups are aggregates of blocks, and tracts are aggregates of block groups. Places are cities and towns. There are about 45,030 blocks in Utah, 1,340 block groups, 400 tracts/BNAs, 230 places, and 90 census county divisions.

The layers are to be linked to statistics from the Census Bureau's Summary Tape Files (STF). The information from these files is extensive and we have chosen to use only the most frequently requested information for our on-line system. Our goal is to have 25 fields from the STF files on-line. These fields would include population characteristics such as age, sex, and race; and housing characteristics such as total housing units and vacancy rates. The fields will also have social and economic characteristics like educational attainment and income levels. We will also be able to access other information from the Summary Tape Files, enabling

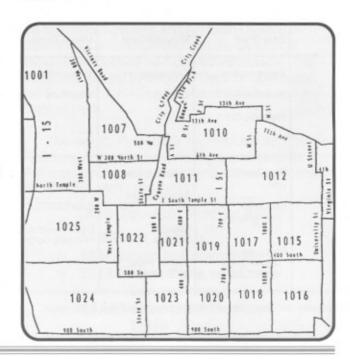

us to accommodate more specialized requests.

The demographic database can be accessed through the SGID Database Query System (DBQ) that is maintained by AGRC. Within the DBQ, a customized application has been developed which allows us to generate tract maps. We presently have tract maps for all counties in the state. The map below, a portion of the Salt Lake County map, was developed using our system.

#### Future Goals for GIS

The power of GIS is that it will allow us to present information in a manner that allows comparisons, and we will be able to present a great amount of detailed data without encountering "information overload." It is also powerful because it can be used for analysis and modeling. By linking the demographic database with other state agencies' databases in the SGID, we can have a better understanding of the data relationships. The improved manageability of data will assist us in disseminating the vast amount of data we receive from the Census Bureau.

GIS is a great tool for managing data. The Demographic and Economic Analysis Section hopes that our database will be utilized extensively for analyzing and modeling, and will support more informed decision making. For more information about DEA's uses of GIS, please call (801) 538-1036.

## State of Utah Economic Forecasts

#### Consumer Sentiment Index

According to the latest Index of Consumer Sentiment taken in January, Utahns' view of the Utah economy dropped 8.8 points, from 82.3 in October 1991 to 73.5 in the January 1992 survey. This is the second drop experienced since the July 1991 survey, at which time consumer sentiment was 87.9.

The U.S. Consumer Sentiment Index witnessed an even greater decrease, falling 10.1 points from 78.3 in October 1991 to 68.2 in January 1992.

Beginning with the October 1990 survey, consumer sentiment in Utah has remained above the U.S. Consumer Sentiment Index (see Figure 2). Utah economists forecast this trend to continue into 1992 and 1993.

The University of Utah Survey Research Center, established in 1984, conducts the survey of consumer sentiment for Utah. Randomly selected persons are surveyed by telephone by the Research Center every January, April, July and October, and these results are published in the Consumer

Sentiment Survey.

Nationally, the Consumer Sentiment Survey has been conducted since 1946 by the University of Michigan's Institute of Social Research. The national survey is much larger than the Utah survey; up to 25 different indices are computed from the questions on the national survey compared to three from Utah's.

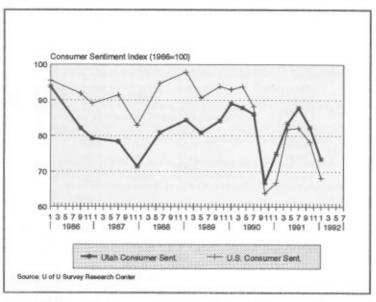

#### Utah and U.S. Economic Indicators

Table 5 presents actual and estimated economic indicators for Utah and the U.S. Table 6 provides revenue estimates for the state of Utah. Both tables are current as of February 1992.

Unrestricted revenue estimates are developed quarterly by the Utah State Tax Commission and the Office of Planning and Budget. The revenue estimates shown were used by the Legislature in formulating the Budget adopted during the Session last February.

Anyone interested in receiving updated economic indicators should contact the Demographic and Economic Analysis section at (801) 538-1036.

 Corporate taxes decline in FY91 largely due to a refund paid to a major corporation.
 The general fund OTHER category decreases in FY92 due to the transfer of revenues collected by the Department of Commerce into a restricted fund.

Effective July 1, 1991, cigarette taxes were raised 3.5 cents per pack.
 Severance tax workover credits are deductible as of January 1990. New sliding scale rates take effect January 1992.
 Investment income declines in FY91 and FY92 due to lower interest rates and fund balances.

6) The uniform school fund OTHER category increases in FY91 and FY92 largely due to settlements reached with IPA.
7) The increase in special fuels collections in FY91 is largely due to the reduction in tax evasion due to the diesel

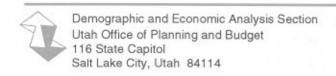

fuel tax now being collected at the pump.

8) The increase in the transportation fund OTHER category in FY92 is due to fee increases for plate replacement, duplicate title certificates, duplicate registrations, and increased charges for driver's licenses.

9) The decline in mineral lease payments in FY91 and FY92 is due largely to new Department of Interior administrative charges for collecting and distributing leases and bonuses.

10) The insurance premium tax for FY91 was reduced \$1.5 million in order to return monies to the 2nd injury fund that were incorrectly deposited into the general fund in FY90.

Ross Reeve, Economist, Demographic Modeling
Dan Warnock, Research Assistant

The Demographic and Economic Analysis section (DEA) of the Utah Office of Planning and Budget provides economic and demographic data and analysis for the governor's office, state and local governments, state agencies, businesses and the public. DEA is also the lead agency in Utah for the Bureau of the Census' State Data and Business and Industry Data Center (SDC/BIDC) programs. While the 35 SDC or BIDC affiliates listed below have specific areas of expertise, they can also provide assistance to data users in accessing Census and other data sources. If you would like a free subscription to this quarterly newsletter, call DEA at (801) 538-1036. All of the affiliates listed below are in Salt Lake City unless noted otherwise. All telephone area codes in Utah are 801.
